[Ask a question about this product](#)

The set (GCM+GPE+GL500) includes a magnetic plate (GCM), a special plug for the socket (GPE) and a 5m 2.5 mm² grounding cable (GL500). The two connecting plates are held magnetically – so there is no need to drill or sew velcro into the shielding material.

In case of grounding 2 separate sheets of the same or different material (e.g. a cover for a double bed) choose the double set (2*GCM+GPE+2*GL500).

All shielding fabrics that have been treated, e.g. ready-made curtains, mosquito nets, floor coverings, sleeping bags, etc. have a Velcro surface already sewn in, so alternatively you can choose the Velcro fabric grounding set.

GCM

Grounding connection with two plates held together with the help of strong magnets.

Includes: Magnetic connection plate 36x36x6 mm, all necessary screws, washers, cable terminals and a screwing tool with Torx®-Bits.

GPE

Earthing plug (CEE 7/7) for portable textile products, such as mosquito nets, sleeping bags, bed linens, etc. (up to 2 connections).

Fixed shielding products (paints, etc.) must not be grounded with this plug. In the case of grounding floor coverings, you can ask us to replace the GPE with the fixed socket plug GP1.

Includes: Earthing plug with protective cover 60x60x15 mm, all necessary screws, washers, cable covers and a screwing tool with Torx®-Bits.

GL500

Grounding cable 2.5 mm², 5m long, to connect GCM, GPE to each other. Also available in dimensions 20cm, 1m, 2m, 5m, 10m.
